Circular Motion
niform circalur mation

Conripot face

$$
\begin{aligned}
F_{c} & =m u_{c} \\
& =\frac{m v^{2}}{R}
\end{aligned}
$$

Wark \& Eneys

$$
\begin{aligned}
\omega & =\int_{A B A \rightarrow B} \vec{F} \cdot d \vec{r} \\
& =K_{B}-K_{A} \\
& =-\left(U_{B}-U_{A}\right)
\end{aligned}
$$

Conserusion $f$ Enory : $K_{A}+U_{A}=K_{B}+U_{B}$

Example
Roller cocos have vertical loops. the radius $f$ curtiore is small at the top the the sides - why?

Solution
Sine $a_{0}=\frac{v^{2}}{R}$, \& $F=$ mas.
the small $R$ is sad the to erse the covripital face or the ter is greater the gravity

Exurple
What is the speed of a rollecocsor I the top $f$ a loap if the radius $f$ curutre thar is 15.0 m \& the dounward accingtar of the Cor is 1.50 g ?
solvion

$$
\begin{aligned}
& a_{c}=1.5 y \\
& a_{c}>g \Rightarrow \text { cas is a trach }
\end{aligned}
$$

Nコー,

$$
\begin{aligned}
a_{c}=\frac{v^{2}}{R} \Rightarrow v & =\sqrt{R a_{c}} \\
& =\sqrt{1.5 R_{y}} \\
& =\sqrt{1.5 \cdot 15 \cdot 9.8} \\
& \simeq 14.8 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

Example
A child $f$ mass 40 hg is in a coll caste car this travels in a loop $f$ radius 7.00 m . At point $A$ the Speed of the car is $10.0 \mathrm{~m} / \mathrm{s}$, if It point B the speed is $10.5 \mathrm{~m} / \mathrm{s}$. Assure the child is not holding an and does not wen a seat belt.
(a) What is the farce $f$ the car sea on the child at port $A$ ?
(b) Whit is the farce $f$ the car seat on the cloud I polit B?
(c) Whit minimum speed is required to learn the child in his scot at $\rho-1$ A?

Solution
(a)

$$
\begin{aligned}
& V_{A}=10.0 \mathrm{~m} 11 \\
& R=7.00 \mathrm{~m} \\
& \mathrm{~m}=40 \mathrm{hg}
\end{aligned}
$$

FBD cor seat (1)

Dis un $M$
FBD cluct (2)

$f$ cossent

$$
\sum \vec{F}=m \vec{c}
$$

(1) $\quad N-M_{j}=-\frac{M v_{A}^{2}}{R}$
(2) $-N-m y=-m v_{\bar{R}}{ }^{2}$

$$
N\left\|_{m g}\right\|^{a_{c}=\frac{v_{A}^{2}}{R}}
$$

Frem (2)

$$
\begin{aligned}
N & =m v_{A}^{2}-m g \\
& =m\left(\frac{v_{A}^{2}}{R}-g\right) \\
& \simeq 179.4 \mathrm{~N}
\end{aligned}
$$

(b) $v_{B}=10.5 \mathrm{r} / \mathrm{s}$

FTD $f$ child

$$
a_{c}=\frac{v_{13}^{2}}{R}
$$

$$
\theta=30^{\circ}
$$

$$
\omega_{y}=\omega \cos \theta
$$

$$
\Rightarrow N=m a_{c}-m g \cos \theta
$$

$$
=m\left(\frac{U s^{2}}{R}-g \cos \theta\right)
$$

$$
\simeq 290.2 \mathrm{~N}
$$

(c) Minimus speed I polit $A$ ? Vain is sud the child Viム3 touche the seat $\Rightarrow$ w, normal force FBD child

$$
\downarrow_{a_{c}}=\frac{v_{n i}^{2}}{R}
$$

$$
\begin{aligned}
& \hat{\imath}^{\top} \sum \vec{F}=m \vec{c} \\
& -N-m g=-m a_{c} \\
& \text { TOT, } N=0 \Rightarrow g=a_{c}=\frac{v_{\mu}^{2}}{R} \\
& \Rightarrow v_{m i n}=\sqrt[J g R]{ } \\
& \simeq 8.3 \mathrm{~m} /
\end{aligned}
$$

Example
If a Car takes a banked cure I less than ideal speed, friction is needed to bleep it from sliding toward the chide $f$ the cue.
(a) Calculi the ideal speed to take a 100.0 m radius curve baked at $15^{\circ}$.
(6) What is the minimum colficien $f$ friction needed for a drive tally the same cove of $20.0 \mathrm{~km} / \mathrm{h}$ ?

Solution

(a)

FBD car

$$
\begin{aligned}
& \sum \vec{F}=r \vec{a} \\
x & : N \sin \theta=m a_{c} \\
y & : N \cos \theta-r y=0 \\
\Rightarrow \quad N & =\frac{m g}{\cos \theta}
\end{aligned}
$$

so, $\quad a_{c}=g \tan \theta$
BN, $a_{c}=\frac{v^{2}}{R}$

$$
\begin{aligned}
\Rightarrow & =\sqrt{g R \tan \theta^{\circ}} \\
& =\sqrt{9.8 \mathrm{~m}_{3} 2 \cdot 100 \mathrm{n} \cdot \tan 15^{\circ}} \\
& =16.2 \mathrm{~m} / \mathrm{s} \quad \mathrm{z} \\
& =16.2 \mathrm{~s} \cdot\left(\frac{3600 \mathrm{~s}}{\mathrm{~h}}\right) \cdot\left(\frac{14 \mathrm{~s}}{1000 \mathrm{~m}}\right) \\
& =58.3 \mathrm{lem}
\end{aligned}
$$

(b)

Nou, for very low speed car

$$
\begin{aligned}
v & =20 \frac{u_{n}}{h} \\
& =20 \frac{u_{n}}{4} \cdot\left(\frac{14}{3600 \mathrm{~s}}\right) \cdot\left(\frac{1000 \mathrm{n}}{140}\right) \\
& =5.6 \mathrm{r} / \mathrm{s}
\end{aligned}
$$

$F B D$

$$
\begin{aligned}
& \frac{\sum \vec{F}=r \vec{a}}{x:} \\
& \text { y: } N \sin \theta-F_{f} \cos \theta=m a_{c} \\
& \text { asor } \quad F_{f}=\mu N \\
& \text { and } \quad a_{c}=\frac{v^{2}}{R}
\end{aligned}
$$

$$
\begin{align*}
& N \sin \theta-\mu N \cos \theta=\frac{m v^{2}}{R}  \tag{1}\\
& N \cos \theta+\mu N \sin \theta=m g \tag{2}
\end{align*}
$$

$$
\begin{align*}
& N \sin \theta-\mu N \cos \theta=\frac{m v^{2}}{R}  \tag{1}\\
& N \cos \theta+\mu N \sin \theta=m g \tag{2}
\end{align*}
$$

Solve (1) for $N$,

$$
N=\frac{m v^{2}}{R} \frac{1}{\sin \theta-\mu \cos \theta}
$$

Solve (2) for $\mu$

$$
\begin{aligned}
\mu & =\frac{m g-N \cos \theta}{N \sin \theta} \\
& =\frac{1}{N} \frac{m g}{\sin \theta}-\frac{1}{\tan \theta}
\end{aligned}
$$

$$
\begin{aligned}
& \mu=\frac{R}{r^{2} v^{2}} \cdot \frac{r \cdot g}{\sin \theta} \cdot(\sin \theta-\mu \cos \theta)-\frac{1}{\tan \theta} \\
&=\frac{R_{g}}{v^{2}}\left(1-\frac{\mu}{\tan \theta}\right)-\frac{1}{\tan \theta} \\
& \Rightarrow \mu\left[1+\frac{R_{g}}{v^{2} \tan \theta}\right]=\frac{R_{g}}{v^{2}}-\frac{1}{\tan \theta}
\end{aligned}
$$

$$
\begin{aligned}
& \mu\left[1+\frac{R_{g}}{v^{2} \tan \theta}\right]=\frac{R_{y}}{v^{2}}-\frac{1}{\tan \theta} \\
& \mu=\frac{\frac{R_{y}}{v^{2}}-\frac{1}{\tan \theta}}{1+\frac{R_{y}}{v^{2} \tan \theta}} \\
& =\frac{R_{g} \tan \theta-v^{2}}{R_{g}+v^{2} \tan \theta}
\end{aligned}
$$

$$
\begin{aligned}
\Rightarrow \mu & =\frac{R_{g} \tan \theta-v^{2}}{R_{g}+v^{2} \tan \theta} \\
& \simeq 0.234
\end{aligned}
$$

Exaype
Gains from a hopper falls it a catc of $l 0 \mathrm{ly} / \mathrm{s}$ voaicall, cuto a cunveyer bolt that is roving hurzaitlly I a conssu speed $f \quad 2 \mathrm{~m} / \mathrm{s}$.
(a) whi is the face seeded to beep the conveyer bett mooing at the coss wocity?
(b) Wht is the minimun pous ff the rotar dning the converer Let?

Solwion

$$
\sum_{\operatorname{grans}} \frac{d m}{d t}=10 \frac{\mathrm{ug}}{\mathrm{~s}}
$$

Conveyer

$$
\longrightarrow v=2 \mathrm{~m} / \mathrm{s}
$$

cal
N.ts.

Really, slaid isteduce conces f monevin to fully undertal /apprecole this problem.

$$
\vec{P}=m \vec{v}
$$

\& NII sass $\vec{F}=\frac{d}{d t} \vec{P}$
B9, her $\vec{v}=\cos t=9, m \neq \cos \theta=5$

$$
\begin{aligned}
& \Rightarrow \frac{d}{d t}(m \vec{v})=\frac{d m}{d t} \vec{v}+m \frac{d}{d t} \\
& \\
& \Rightarrow \vec{F}=\frac{d m}{d t} \vec{v} \\
& F=\frac{d m}{d t} \cdot v=10 \mathrm{~kg} \cdot\left(2 m_{s}\right) \\
& \\
& \Rightarrow F=20 \sim
\end{aligned}
$$

(b)

Pows

$$
\begin{aligned}
P & =F \cdot v \\
& =\frac{d m}{d t} v^{2}
\end{aligned}
$$

$$
\Rightarrow P=40 \mathrm{~W}
$$

Exarple
A sadl block $f$ ross 200 g stâs 9 CoI at $A$, slides to $B$ whe its spead is $v_{B}=8.0 \mathrm{mrs}$, then stiders along the harzanat suntace a distince 10 m before coring to res at $C$.
(a) wht is the wash foridim clang the courch suntace?
(b) whe is the coeffion of lentic fribion aly the hirzat surface?

SuDion
(a) Wake $f$ fridion a canved sunface

$$
\begin{aligned}
W & =\int \vec{F} \cdot d \vec{r} \\
& =\int \vec{F}_{y} \cdot d \vec{r}+\int F_{f} \cdot d \vec{r} \\
& =-\left(U_{B}-U_{A}\right)+W_{f r}
\end{aligned}
$$

加, wso $\omega=K_{B}-K_{A}$

$$
\begin{aligned}
& \Rightarrow \quad K_{B}-K_{A}=-U_{B}+U_{A}+w_{f r} \\
& \left.\Rightarrow \quad \omega_{f_{r}}\right|_{A \rightarrow B}=K_{B}+U_{B}-\left(K_{A}+U_{A}\right)
\end{aligned}
$$

Non,

$$
\begin{array}{ll}
\frac{A}{k_{A}=0} & \frac{\beta}{K_{B}=\frac{1}{2} m v_{B}^{2}} \\
U_{A}=r g h & U_{B}=0
\end{array}
$$

Sor

$$
\begin{aligned}
w_{f r} & =\frac{1}{2} m v_{B}^{2}-m g h \\
& =\frac{1}{2}(0.2 g)\left(8 \mathrm{~ms}_{s}\right)^{2}-(0.2 v) \cdot\left(9.8 \mathrm{~m}_{\mathrm{s}}\right) \cdot(4 \mathrm{~m}) \\
& =-1.44 \mathrm{~J}
\end{aligned}
$$

(b)

$$
\begin{aligned}
\left.w_{f r}\right|_{B \rightarrow C} & =k p_{c}^{0}-k_{B} \\
& =-\frac{1}{2} n v_{n}^{2} \\
& =-6.4 \mathrm{~J}
\end{aligned}
$$

B9

$$
\begin{aligned}
& W_{f r}=-F_{f} \Delta x \\
&=-\mu m g \Delta x \\
& \Rightarrow \mu=\frac{-\omega_{f r}}{m g \Delta x}=\frac{6.4 J}{(0.2 \mathrm{~L})(9.8 \sim-s) \cdot(10 n)} \\
& N=r j
\end{aligned} \quad\left\{\begin{array}{l}
F_{f}=\mu v \\
\\
\Rightarrow \mu=0.33
\end{array}\right.
$$
