

PHYS 772 – The Standard Model of Particle Physics

Term: Spring 2024 Credit Hours: 3 Time: Mon/Wed 11:00 am - 12:20 pm Location: Boswell Hall, Room 2 Webpage: https://ajackura.github.io/courses/phys772_spring_2024.html

Contact Information

Instructor: Prof. Andrew W. Jackura (he/his/him)
E-mail: awjackura@wm.edu
Phone: 757-221-6369
Office: Small Hall, Room 326B
Office Hours: Mon/Wed 2:00 pm - 3:00 pm, or by arrangement

Course Information

Prerequisite: PHYS 721 - Quantum Field Theory I or equivalent. This course assumes comfort with tree-level calculations of cross sections in QED and decay rates in theories of scalars and fermions. Concurrent enrollment in PHYS 722 - Quantum Field Theory II is *strongly* recommended.

Overview: This course is a technical introduction to the Standard Model of Particle Physics. It will provide the necessary background needed to carry out research in modern particle and nuclear physics. We will review aspects of gauge theories and their use in the description of electroweak and strong interactions, and construct the Standard Model from the observed fundamental symmetries of nature. Goals include understanding the Standard Model theory, calculating elementary observables, and comparing theoretical results to experimental measurements.

Outcomes: After successfully completing this course, the student should be able to:

- Understand the role of discrete and continuous symmetries in the construction of the Standard Model.
- Understand the path-integral formulation of quantum theory, and to learn how to apply this formalism to gauge theories and derive Feynman rules.
- Understand the underlying principles and structure of the Standard Model of particle physics, in particular its formulation in terms of quantum gauge theories spontaneously broken via the Higgs mechanism.
- Understand predictions of the Standard Model and comparisons with experimental data, in particular the calculation of scattering and decay rates for elementary processes and referencing the *Review of Particle Physics*.
- Understand the key open questions in particle physics and the motivation for physics beyond the Standard Model.

Text: There is no required textbook for the course. Two texts are recommended, and suggestions for additional texts to consult can be found in the detailed bibliography. Familiarity with the *Review of Particle Physics* by the Particle Data Group (PDG) is required, see https://pdg.lbl.gov.

Recommended:

- Dynamics of the Standard Model, by Donoghue, Golowich, and Holstein, Cambridge University Press, ISBN: 978-1-00-929103-3 Open Access through Cambridge Core (link)
- Quarks & Leptons: An Introductory Course in Modern Particle Physics, by Halzen and Martin Wiley, ISBN: 978-0-471-88741-6

Lectures: I plan to focus primarily on the theoretical construction of the Standard Model of Particle Physics. A prerequisite for this course is PHYS 721 - Quantum Field Theory I. This course assumes comfort with tree-level calculations of cross-sections in Quantum Electrodynamics. I will avoid many details and proofs usually found in a field theory course, and focus only on relevant information needed to build the Standard Model and study elementary processes. However, quantum field theory is a cornerstone of the Standard Model. Therefore, it is *strongly* encouraged you enroll in PHYS 722 - Quantum Field Theory II concurrently, if you have not taken it already. This course is meant to complement the phenomenological presentation of the subject given in PHYS 638 - Nuclear and Particle Physics, offered on regular rotation by the Department of Physics at William & Mary.

The lectures will focus on three primary topics: **Symmetries**, **Gauge Theories**, and **Phenomenology** of the Standard Model. We will review aspects of quantum field theory and Quantum Electrodynamics. Starting from the fundamental symmetries observed in nature, we will construct the gauge field theories of the Standard Model – Quantum Chromodynamics and Electroweak theory. We illustrate the success of the Standard Model by computing various elementary processes and comparing the results with experimental measurements. Consult the tentative schedule for a detailed list of topics to be covered throughout the course.

Lecture Notes: Lecture notes will be posted on the course website, which will sometimes contain a bit more information than we cover during lecture time. *Please let me know of any errors you spot in the notes.*

Important Dates: See the University registrar for the complete academic calendar (link). Please note the following dates:

First Day of Class	Wed, Jan 24
Last Day of Add/Drop	Fri, Feb 2
Last Day for Withdrawl	Mon, Mar 25
Last Day of Class	Fri, May 3
Spring Break	Mar 9 - 17 (no class)
APS April Meeting	Apr 3 - 6 (no class)
Final Exam	Thu, May 9

Assessment

Problem Sets: There will be weekly problem sets assigned on Wednesdays, and due the following Wednesday at the beginning of class. In case of holidays, breaks, or conferences, the deadline may be adjusted accordingly. I strongly encourage you to discuss the problems with your fellow students, however assignments must be turned in individually and mindless copying of solutions will not be tolerated. Assignments can be submitted either typeset or handwritten. Please ensure your submissions are well-structured and legible. Late assignments will not be accepted unless prearranged under extreme circumstances.

Exams: There will be one take-home final exam. The take-home final exam will be due at the time of the final exam (**Thursday May 9, 12:00 pm**). In contrast to the problem sets, you are expected to solve the exam individually.

Evaluations: Final grades will be calculated from the weekly problem sets, and the take-home final exam. Their contributions to the total grade is:

Problem Sets	70%
Take-Home Final	30%

Final letter grades will be determined from the numerical grades using:

Grade	Percentage	Grade	Percentage	Grade	Percentage
		А	93 - 100	A-	88 - 93
B+	83 - 88	В	78 - 83	B-	73-78
C+	68 - 73	С	63-68	C-	58-63
D+	53 - 58	D	48 - 53	D-	43 - 48
F	< 43				

Policies

Attendance: Attendance does not form part of the grade for this class and thus is not mandatory. However, you are responsible for your own understanding of the course material. Attending class will significantly improve your enjoyment of the course and will likely improve your satisfaction with both your own understanding and your grade.

Rescheduling: On occasion, there may be need to reschedule a lecture. The class will be polled to decide on when the make-up lecture will take place. Note that there is **no class April 3-6** due to 2024 American Physical Society April meeting.

Auditing: Students are welcome to audit this course (i.e. participate not for credit). Since one only learns by doing, students who audit this course are expected to hand in exercises as well as the final take-home exam. Although you will not be graded on them, you are expected to make a good faith effort as you would for other courses.

Electronic Devices: You are welcome to bring laptops and mobile devices to class and are responsible for their appropriate use. Please be considerate of others in the class and avoid disrupting the lecture.

Code of Conduct: You will be expected to follow the William & Mary Honor Code as well as the Code of Student Conduct. "As a member of the William & Mary community, I pledge on my honor not to lie, cheat, or steal, either in my academic or personal life. I understand that such acts violate the Honor Code and undermine the community of trust, of which we are all stewards." To read the Honor Code, please see https://www.wm.edu/honor.

Accommodations: William & Mary accommodates students with disabilities in accordance with federal laws and university policy. Any student who feels they may need an accommodation based on the impact of a learning, psychiatric, physical, or chronic health diagnosis should contact Student Accessibility Services staff at 757-221-2512 or at sas@wm.edu to determine if accommodations are warranted and to obtain an official letter of accommodation. For more information, please see https://www.wm.edu/sas.

Mental and Physical Well-Being: William & Mary recognizes that students juggle different responsibilities and can face challenges that make learning difficult. There are many resources available at W&M to help students navigate emotional/psychological, physical/medical, material/accessibility concerns, including:

- The W&M Counseling Center at 757-221-3620.
- The W&M Health Center at 757-221-4386.
- A list of other wellness resources available to students can be found at: https://www.wm.edu/offices/wellness/resources/
